

## PROJECT OVERVIEW

### **Project-Scope**

### Development ETL process as basis for soccer match forecasts, which users can use against payment

- Goal: Short-term liquidity protection of the company
- Period of time: 3 days.
   Due to time, project focuses on a data extract
- Implementation in AWS

### **Data Understanding**

- Database consisted of 7 tables, refers to 11 countries (1st league)
- The project focuses on 5 tables, with emphasis on match and team tables
- Within the tables the focus is set on columns that are essential for the evaluation.

  Peason: Time and

**Reason:** Time and budget constraints

### Data Model/ ETL Process

- A data vault schema is used to ensure the expandability of the database or the forecast model
- Components: 1 Hub, 1 Link and 12 Satellites

#### Use Case

### **Use Case**

- Implementation of the Home Advantage Approach
- Forecast for victory of the home team, because of home advantage
- Result: Ranking list for clubs by league and season

### Communication

 Presentation within the BDE course

### Outlook:

- Completion of data model
- Extension of the model by e.g. detailed attributes on player level
- Evaluation of the forecast model during operation

## PROJECT SCOPE

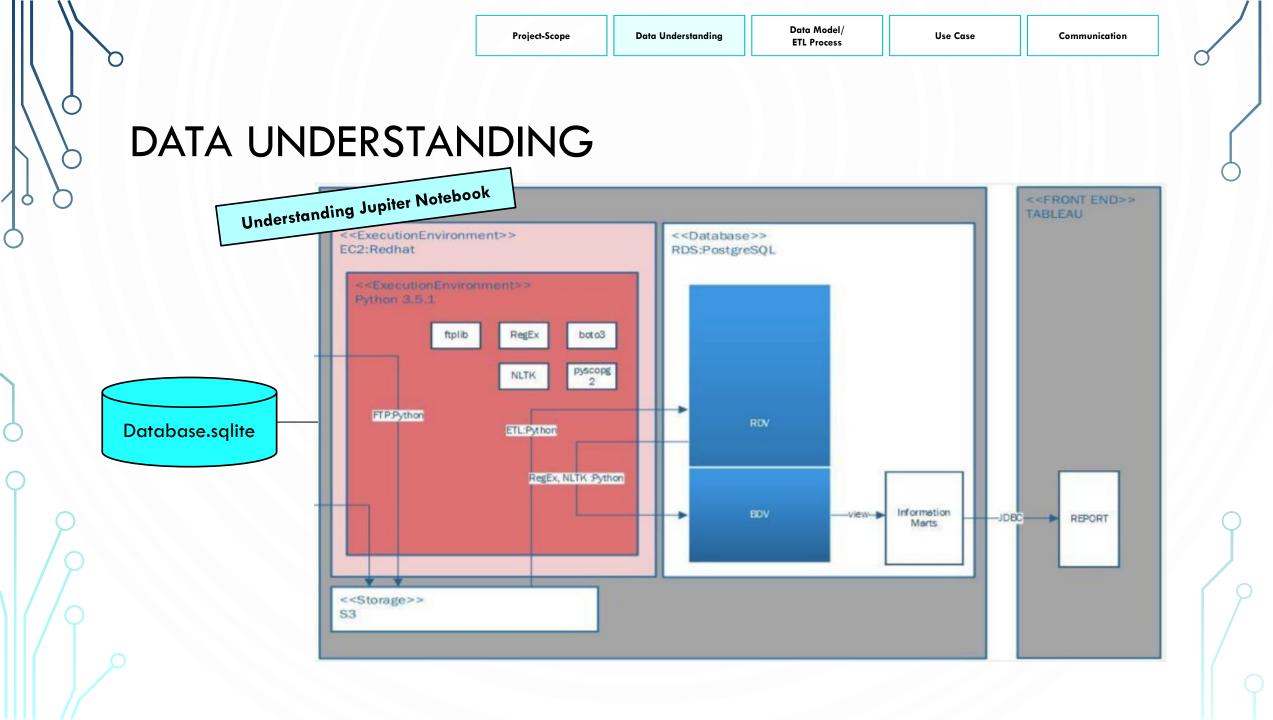

### **Customer Requirements**

- Development of ETL process as basis for soccer match forecasts
- Users should be able to use the forecast model against payment
- Goal: Ensure Short-term liquidity of the company XYZ based on the above business model (within 6-12 months)
- Period of time: 3 days. Due to time constraints, project focuses on data extraction (i.e. match and team tables)
- Next project phases: Use more detailed attributes (e.g. player performance)
- Implementation in AWS

## Interview with Stakeholders

- 2 interviews with head of department
  - 1st discussion: First in-depth discussions on the project scope
  - 2nd discussion: Approval of project
- 2 Interview with Tech-Expert
  - 1st discussion: First version of the Data Vault model agreed, first detailed questions about data model
  - 2nd discussion: Confirmation of Data Vault model. Confirmation of hash key code and insert conditions

### **Data Understanding**

- Database consisted of 7 tables, refers to 11 countries (1st league)
- The project focuses on 5 tables, with emphasis on match and team tables
- Within the tables the focus is set on columns that are essential for the evaluation.

Reason: Time and budget shortage

## DATA VAULT MODELLING

Based on our approach,
we keep the history of
the data. Moreover, all
data up to its source
system are
traceable.

## CONCLUSION

**Ambitious Real World Project** 

### Goal:

• Short-term liquidity protection of the company XYZ based on identified business model (i.e. providing betting tool against payment). Planned ROI within 6-12 months

### Challenge:

Identify business case and set scope (i.e. focus on part of the data)

### **Outlook:**

- Completion of the Data Vault Model
- Extension of the model by e.g. detailed attributes on player level
- Evaluation of the forecast model during operation
